Contents of volume 73

Number 1

LARISSA K. SAMUELSON and LINDA B. SMITH (*Indiana University*)
Early noun vocabularies: do ontology, category structure and syntax correspond? 1–33

DAVID KEMMERER (*University of Iowa Hospitals and Clinics*)
''Near'' and ''far'' in language and perception, 35–63

SOFKA BARREAU (*University of East London*) and John Morton (*University College, London*)
Pulling smarties out of a bag: a headed records analysis of children's recall of their own past beliefs, 65–87

Brief article

ROBERTO DELL'ACQUA and JONATHAN GRAINGER (*Université de Provence*)
Unconscious semantic priming from pictures, B1–B15

Number 2

JOHN C. TRUESWELL, IRINA SEKERINA, NICOLE M. HILL and MARIAN L. LOGRIP (*University of Pennsylvania*)
The kindergarten-path effect: studying on-line sentence processing in young children, 89–134

JANE GILLETTE, HENRY GLEITMAN, LILA GLEITMAN and ANNE LEDERER (*University of Pennsylvania*)
Human simulations of vocabulary learning, 135–176

PHILLIP WOLFF (*University of Maryland*), DOUGLAS L. MEDIN and CONNIE PANKRATZ (*Northwestern University*)
Evolution and devolution of folkbiological knowledge, 177–204

Brief articles

M.T. TURVEY, KEVIN SHOCKLEY and CLAUDIA CARELLO (*University of Connecticut*)
Affordance, proper function, and the physical basis of perceived heaviness, B17–B26

SIMON GERHAND and CHRISTOPHER BARRY (*Cardif University*)
Age-of-acquisition and frequency effects in speeded word naming, B27–B36

Number 3

MARK SMITH and LINDA WHEELDON (*University of Birmingham*)
High level processing scope in spoken sentence production, 205–246

GERRY T.M. ALTMANN and YUKI KAMIDE (*University of York*)
Incremental interpretation at verbs: restricting the domain of subsequent reference, 247–264

FRANCK RAMUS, JACQUES MEHLER (*University of Amsterdam*) and MARINA NESPOR (*Università di Ferrara*)
Correlates of linguistic rhythm in the speech signal, 265–292

Discussion papers

GARY F. MARCUS (*New York University*)
Language acquisition in the absence of explicit negative evidence: can simple recurrent networks obviate the need for domain-specific learning devices?, 293–296

DOUGLAS L.T. ROHDE and DAVID C. PLAUT (*Carnegie Mellon University*)
Simple recurrent networks can distinguish non-occurring from ungrammatical sentences given appropriate task structure: reply to Marcus, 297–300

Brief articles

DENISE DELLAROSA CUMMINS and ROBERT CUMMINS (*University of California*)
Biological preparedness and evolutionary explanation, B37–B53

HIROKI SATO, TATSUYA TAKEUCHI (*The University of Tokyo*) and KUNIYOSHI L. SAKAI (*The University of Tokyo and Japan Science and Technology Corporation (JST)*)
Temporal cortex activation during speech recognition: an optical topography study, B55–B66
